

Targeted consultation on open finance framework and data sharing in the financial sector

Fields marked with * are mandatory.

Introduction

In finance and beyond, there is a broad technology-driven trend towards greater use of data and data sharing. The Commission highlighted the need for better access to public and private data and its reuse in the [data strategy for Europe](#), which includes several cross-cutting policy initiatives

- i. common European data spaces in various sectors of the economy
- ii. data sharing between businesses and governments
- iii. sharing of industrial data across sectors

In order to promote the ambitious data strategy across the economy, in 2020 the Commission proposed a [Data Governance Act \(DGA\)](#), a [Digital Services Act \(DSA\)](#) and a [Digital Markets Act \(DMA\)](#). These initiatives, among other things, provide a coherent governance framework for the common European data spaces, establish rules for data intermediaries and other online intermediaries, as well as establish obligations for online gatekeeper platforms. Furthermore, in 2022 the Commission proposed a [Data Act](#), containing further policy measures as regards access to the “Internet of things” (IoT) data as well as general modalities for data access and reuse across the economy.

In 2020, the Commission also identified promotion of data-driven finance as one of the priorities in its [digital finance strategy](#). In 2021, the Commission established an expert group on European financial data space to continue its engagement with stakeholders in this priority area, which created a dedicated subgroup on open finance in 2022. Open finance should form an integral part of the European financial data space, along with data contained in public disclosures of firms as well as supervisory data. On 25 November 2021, the Commission adopted legislative proposals on the European Single Access Point (ESAP) to public disclosures as part of the [capital markets union \(CMU\) package](#). The objective is to consolidate online access to the financial and sustainability-related data of companies and financial institutions in a single interface. The legislation also provides for a machine-readable format. On 15 December 2021, the Commission adopted its [strategy on supervisory data in EU financial services](#). Next, subject to an impact assessment, a new open finance framework has been announced in the [capital markets union communication](#) of 25 November 2021, building on and in full alignment with broader policy initiatives on data access and governance. The communication pointed out that an open finance framework should be based on the principle of a level playing field for existing and new entrants, and subject to data protection rules and clear security safeguards.

Open finance refers to third-party service providers' access to (business and consumer) customer data held by financial sector intermediaries and other data holders for the purposes of providing a wide range of financial and information services. Currently, third party service providers have to rely on limited sources of customer data access rights in the financial sector: the revised [Payment Services Directive \(PSD2\)](#) with respect to payment accounts data of both retail and business customers, as well as the [General Data Protection Regulation \(GDPR\)](#) with respect to personal data held by any financial service provider. However, GDPR enables third party service providers to have direct access only when it is technically feasible, which therefore does not guarantee such access. The recent Data Act proposal does not introduce any new data access rights in the financial sector either.

Based on the Commission's mandate and as announced in the [Retail payments strategy](#) of 24 September 2020, a PSD2 review has been launched to report on the application and impact of EU rules on payment services. The lessons learned from PSD2 as regards third-party service providers' access rights to payment accounts upon customer request will be taken into account when designing the open finance framework. Since the entry into force of PSD2, a number of stakeholder initiatives in this area have also developed, including application programming interface (API) standardisation and access schemes.

The present targeted consultation on open finance complements the "Have your say" consultation on open finance (included in the "Have your say" consultation on the PSD2 review). The objective of this targeted consultation is to gather evidence and stakeholder views on various aspects related to the state of play and further development of open finance in the EU and effective customer protection. It also takes into account and complements the ongoing work of the Expert group on the European financial data space (parts I and II). In addition, the targeted consultation seeks stakeholder views on the use of aggregated supervisory data for research and innovation and on broader questions of data sharing among financial firms for risk monitoring or compliance purposes (part III).

This targeted consultation is targeted at different stakeholder groups: customers of financial services firms (consumers and corporate customers), financial institutions and other firms which are either holding data or intending to use it.

Sections I and II of this targeted consultation covers the following data types

- the use of confidential customer data collected for the purpose of providing financial services (for example, this excludes the data contained in public disclosures and the use of data for supervisory and law enforcement or similar purposes)
- data held by both financial institutions and other firms, provided that it is used for the purposes of providing financial services
- access to and reuse of raw data only, as opposed to enriched data

By way of illustration, the consultation covers: data on accounts held by corporate and retail customers with financial service providers (e.g. payments, savings, securities), as well as on their insurance and pension products, and data relevant to the risk and sustainability profile of such products.

As the nature and scope of practical use cases for open finance is constantly under development, this targeted consultation does not attempt to establish a full taxonomy of such cases. However, every respondent is expected to provide responses in particular for their area of activity. In addition, the consultation seeks feedback on two specific areas of use cases to illustrate which are of particular relevance to the Commission objectives of promoting safe retail investment, and SME access to finance.

Section III of this targeted consultation covers certain additional data sharing issues, beyond open finance. They seek views on the need to enhance legal certainty about the possibility to make supervisory data available more extensively for research and innovation, and the possibility for financial institutions to exchange among themselves information and data to improve risk monitoring or compliance, while protecting data confidentiality.

Please note: In order to ensure a fair and transparent consultation process **only responses received through our online questionnaire will be taken into account** and included in the report summarising the responses. Should you have a problem completing this questionnaire or if you require particular assistance, please contact fisma-psd2-review@ec.europa.eu.

Credit referencing / credit reporting / credit data solutions

The Commission will publish all contributions to this targeted consultation. You can choose whether you would prefer to have your details published or to remain anonymous when your contribution is published. **For the purpose of transparency, the type of respondent (for example, 'business association, 'consumer association', 'EU citizen') is always published. Your e-mail address will never be published.** Opt in to select the privacy option that best suits you. Privacy options default based on the type of respondent selected

* **Contribution publication privacy settings**

The Commission will publish the responses to this public consultation. You can choose whether you would like your details to be made public or to remain anonymous.

Anonymous

Only the organisation type is published: The type of respondent that you responded to this consultation as, your field of activity and your contribution will be published as received. The name of the organisation on whose behalf you reply as well as its transparency number, its size, its country of origin and your name will not be published. Please do not include any personal data in the contribution itself if you want to remain anonymous.

Public

Organisation details and respondent details are published: The type of respondent that you responded to this consultation as, the name of the organisation on whose behalf you reply as well as its transparency number, its size, its country of origin and your contribution will be published. Your name will also be published.

I agree with the [personal data protection provisions](#)

PART I

Part I of the consultation contains the following sections

- I. The relevance of data sharing in the financial sector
- II. Customer protection
- III. Modalities of data access and reuse in the financial sector
- IV. Technical infrastructure

I. The relevance of data sharing in the financial sector

Question 1. What type of actor in the data value chain are you?

Please select as many answers as you like

- Individual customer of a financial service provider
- Business customer of a financial service provider
- Holder of customer data
- User of customer data
- Data intermediary between data holders and users
- Other

Please specify to what other type of actor you refer in your answer to question 1:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Credit reference agencies (CRAs) or credit bureaus. CRAs collect information about consumers and businesses from various sources and build databases that hold all this data. The sources of that information include financial information from lenders, utility suppliers and telecoms businesses and some public records, such as court judgements. Lenders and other organisations carry out searches against that information.

There are a number of lawful bases available to process that information. Still, the majority of CRAs activity (e.g. promoting responsible lending and helping to prevent over-indebtedness) is on the basis that the processing is necessary to pursue the legitimate interests of the CRAs, third parties (such as their clients) and those of individuals. The use of legitimate interest as a ground for data processing in our industry has been confirmed by the European Courts and Data Protection Authorities. In addition, in several Member States CRAs activities are carried out under the legal basis of public interest, which signals how important those Member States have assessed the CRAs processing activities.

CRAs facilitate responsible lending by providing services that allow lenders to access information about a person, including how they are managing current debt, have managed debt in the past and whether they have sufficient income to repay the debt. In that regard, open banking/open finance are complementary sources of data for assessing creditworthiness because they are subject to consumer consent. Open banking / finance data alone may not accurately reflect a complete picture of the borrower's financial position as consumers may opt to only share favourable data. In addition, open banking / finance data on its own may only show positive information whereas paired with credit data it can help show a fuller richer picture of the consumer.

Question 2. In what part of the financial sector are you active?

Please select as many answers as you like

- Banking
- Payments
- Insurance
- Asset management
- Securities trading
- Brokerage
- Pensions
- Data and information services
- Not active in the financial sector
- Other

Question 3. In your opinion, is there an adequate framework for data access rights in place in the financial sector beyond payment accounts?

- Yes

- No
 - Don't know / no opinion / not applicable
-

Question 4. As a customer of a financial service provider, would you be willing to grant other businesses (“third parties”) access to the data you generate with this provider for one of the following purposes?

Please select as many answers as you like

- Receive a comprehensive overview of your financial situation based on data from all your existing financial service providers (e.g. consolidation of data from several investment portfolios)
 - Receive additional financial services from another financial services provider
 - Switch to another financial services provider in an easy and simple way
 - Other
 - None of the above
-

Question 5. What open finance-based products would stand to benefit retail customers the most?

Please select as many answers as you like

- Comparison tools that facilitate provider switching
- Online brokerages that provide financial products with the best value
- Personalised advice and tailored financial products
- Personal finance management tools (e.g. overdraft alerts and recommendations for choosing lower interest rates products, lower overdraft charges)
- Personal wealth management tools to monitor and manage assets and liabilities (e.g. financial goal management, analytics of investments and their returns, monitoring of wealth factors such as savings, spending and budgets)
- Alternative credit scoring methods for financial inclusion (e.g. gig economy workers)
- Quicker customer onboarding with financial service providers
- Pension tracking tools that provide a comprehensive overview of entitlements
- Digital tools to assess the ESG profile of financial products (e.g. the environmental impact of investment portfolios or carbon footprint estimation of specific products)

- All of the above
 - Other
-

Question 6. What would be your quantitative and/or qualitative estimate of such retail customer benefits for these products?

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 7. What open finance-based products would stand to benefit corporate customers (notably SMEs) the most?

Please select as many answers as you like

- Comparison tools that facilitate provider switching
 - Online brokerages that provide financial products with the best value
 - Personalised advice and tailored financial products
 - Personal finance management tools (e.g. overdraft alerts and recommendations for choosing lower interest rates products, lower overdraft charges)
 - Personal wealth management tools to monitor and manage assets and liabilities (e.g. financial goal management, analytics of investments and their returns, monitoring of wealth factors such as savings, spending and budgets)
 - Alternative credit scoring methods for financial inclusion (e.g. gig economy workers)
 - Quicker customer onboarding with financial service providers
 - Pension tracking tools that provide a comprehensive overview of entitlements
 - Digital tools to assess the ESG profile of financial products (e.g. the environmental impact of investment portfolios or carbon footprint estimation of specific products)
 - All of the above
 - Other
-

Question 8. What would be your quantitative and/or qualitative estimate of such corporate customer benefits for these products?

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 9. In your opinion, should financial firms holding customer data be allowed to share their customer data with customer's permission?

- With regulated financial institutions only
- With any financial and information service providers active in the financial sector
- With any third-party firm, including in other sectors of the economy
- Firms should not be allowed to share customer data
- Don't know / no opinion / not applicable

Please explain your answer to question 9:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Financial firms holding customer data should be allowed to share their customer data with customers' permission. However, customer data may also be shared in the absence of that permission, for example, when firms share data (as they already do today) to pursue their legitimate interests, those of their clients and those of individuals and, in doing so, they support a well-functioning economy as a whole. Examples of legitimate interests are: (i) the correct measurement of solvency and credit risk; (ii) the correct evaluation of the reliability and punctuality of the interested party's payments; and (iii) the prevention of the risk of fraud, including the prevention of the risk of identity theft. In that regard, firms may share data about a consumer, including how they are managing current debt and have managed debt in the past. It can be argued that customers would not give their permission to the sharing of information on late payments, arrears, defaults, etc. However, lenders have a legitimate interest in sharing that information via credit databases.

Furthermore, data sharing in the financial sector concerns primarily information about a consumer's financial and economic situation. It makes sense in the first instance to focus data sharing on any services provider active in financial services as such companies that have the expertise to offer open finance-based products that can provide a direct, immediate benefit to consumers.

Question 10. Should financial firms holding customer data be entitled to compensation by third parties for making the data available in appropriate quality, frequency and format?

- Yes
- No
- Don't know / no opinion / not applicable

Question 10.1 If yes, should its level:

- be limited to the cost of putting in place the required technical infrastructure
- allow for a reasonable return on investment for collecting and structuring the data
- be set in another way
- don't know / no opinion / not applicable

Question 11. What other conditions are required to ensure the potential of open finance is maximised while minimising its risks?

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Open finance must prioritise use cases with high potential and benefit for consumers and firms, as well as clear industry incentives. It should also complement what exists and works well in the market today: it should add value to existing markets and systems for the sharing and reuse of financial data.

From a credit referencing perspective, Open Finance should not lead to an overall decrease in the comprehensiveness, supply and accuracy of credit information, and on the ability of CRAs to fulfil their duties and lend stability to the credit system.

Moreover, open finance must be based on a level playing field, including fair competition and equal, “bi-directional” and fair access to data. Access to that data has to be uncomplex and safe.

It is also fundamental to create legal certainty regarding for example the legal basis and how information may be paired and processed as legal uncertainty creates obstacles for investments and the creation of new services. Legal certainty also includes providing clarity on how to process silent party data and sensitive data categories that may be included in an individual's or legal entity's financial data.

Question 12. What policy measures would be important to ensure a level playing field in terms of access to customer data?

- Ensuring access by financial institutions to the non-financial data of customers

- Subjecting all third-party service providers that access customer data held by financial service providers to financial supervision and regulation
- Other
- A level playing field already exists, so no measures necessary
- Don't know / no opinion / not applicable

Please specify to what other policy measure(s) you refer in your answer to question 12:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

In an environment where access is based on customer consent, there should be an open competition to collect data.

When data could be accessible without customer consent, equal access to data is essential, so that all third parties have access to all relevant data. For example, it would be desirable that all lenders are obliged to share both negative and positive repayment information of their borrowers. There is currently an unlevel playing field across the EU Single Market due to the heterogenous breadth and depth levels of credit data availability.

Question 13. Does open finance framework bear any possible risk of accumulation of data, leading to the creation of monopolies?

- Yes
- No
- Don't know / no opinion / not applicable

Questions for financial firms holding customer data

Question 14. As a financial firm holding customer data, do you make any data available to third parties beyond the data that you are required to share under PSD2, GDPR or other laws?

- Yes
- No
- Don't know / no opinion / not applicable

Questions for firms using customer data held by financial firms

Question 15. As a firm using customer data held by financial firms, what is the purpose of accessing these data?

Please select as many answers as you like

- Provision of services competing with the services offered by the data holder
- Provision of additional services
- Provision of analytical insights based on aggregated, including anonymised, data
- Other

Please specify to what other purpose(s) you refer in your answer to question 15:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

CRA's collect information about consumers and businesses from various sources, including financial firms and build databases that hold all of this data. Lenders carry out searches against that information for several reasons. Although there are differences among the Member States, those reasons generally include assessing creditworthiness and ability to afford financial products, checking the accuracy of other information, preventing and detecting crime (such as fraud or money laundering), checking identity, etc.

The information held about a consumer's credit history and current financial standing by a CRA's is referred to as a credit report. Credit reports provided by CRA's allow lenders to better assess credit risks. At the same time, they allow potential borrowers with good payment histories to negotiate more favourable terms on credit applications.

Other market operators beyond lenders use the services of CRA's e.g., (i) telecommunication, energy and other utility providers, that use credit databases to prevent fraud and to reduce and recover debts; (ii) central banks, that rely on external credit databases where no public database exist, to assess the quality of bank's credit portfolios, conduct financial supervision and ensure the stability and resilience of the whole financial system; and (iii) some governments and agencies, that use credit databases public interest purposes (e.g. statistics, fraud prevention, etc.)

CRA's also provide credit scores. A credit score is an estimate of how likely it is that a consumer will repay credit on time in the future. They are typically used by lenders as a complementary element to help them decide whether to give or refuse credit.

Question 16. As a firm using customer data held by financial firms, have you experienced any difficulties in accessing these data?

- Yes
- No
- Don't know / no opinion / not applicable

Question 16.1 If you have experienced difficulties in accessing these data, please specify if the data holder has:

Please select as many answers as you like

- refused to give access to data outright, with no valid reasons provided
- been prevented to give access to data due to legal obstacles
- set contractual or other restrictions on the use of these data
- set unreasonable fee levels for access to these data
- been unable to provide these data in the required format, frequency or quality
- other

Please specify to what other behaviour(s) of the data holder you refer in your answer to question 16.1:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Some credit databases do not contain positive information i.e., information that covers facts of an individual's contractually compliant behaviour, the value of an individual's credit commitments and the cost of meeting those credit obligations. Positive data provides more detailed information about a consumer's loans and credit availability and a more comprehensive picture of a consumer's financial behaviour. In some Member States, positive data cannot be used for creditworthiness assessments for legal reasons (e.g., France). In other Member States, local banks have been reluctant to share positive credit data through private credit databases (e.g., Spain).

Question 17. As a firm using customer data held by financial firms, with how many data holders in the EU would you have to interact on average to develop and offer a financial product or service to customers?

- Less than 10
- 10 to 99
- 100 to 999
- 1000 to 9999
- More than 10000
- Don't know / no opinion / not applicable

Question 17.1 In how many Member States would these be located?

- 1 Member State
- 2 to 5 Member States
- More than 5 Member States
- Don't know / no opinion / not applicable

Questions for financial data intermediaries

Question 18. As a financial data intermediary, have you experienced difficulties in organising data sharing between data holders and data users?

- Yes
- No
- Don't know / no opinion / not applicable

Regulation and supervision of open finance information services

Under PSD2, a dedicated licensing framework for account information service providers is in place to ensure proper regulation and supervision of these activities.

Question 19. In your opinion, should the scope of account information service provider licenses put in place under PSD2^[1] be extended to cover all financial services where new data access rights for third-party service providers would be introduced?

¹ Limited scope licenses which allow account information services providers to provide consolidated information on one or more payment accounts held by the payment service user with either another payment service provider or with more than one payment service provider

- Yes
- No
- Don't know / no opinion / not applicable

Questions for firms using customer data held by financial firms

Question 20. Do you hold any financial services license (authorisation)?

- Yes
- No
- Don't know / no opinion / not applicable

Question 20.1 If you do you not hold a financial services license (authorisation), please specify at how much would you estimate the cost of obtaining a license (authorisation) that may be required to access customer data held by financial service providers:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

II. Customer protection

Control over the use of personal data is a key pillar in protecting the digital self-determination of a user and building a trust framework. Ensuring that customers have meaningful control over the use of their personal data is essential to guarantee the lawfulness of data processing. Open finance framework should aim to establish trust by ensuring that customers are informed about the processing of their personal data, and that the information provided is accurate.

Question 21. In your opinion, what digital tools can strengthen a customer's ability to grant, track and withdraw consent?

Please select as many answers as you like

- Consent management dashboards to enable customers to track which third parties have been granted consent
- Digital identity solutions, such as European digital identity wallets^[2], which could help identify a customer online and authenticate consent
- Other

² The European digital identity wallet is a product and service that will allow natural and legal persons in the Union to store credentials linked to their identity, and provide them to relying parties upon request, for the purpose of authentication and access to public and private services. It was proposed in June 2021 as part of the [European digital identity framework \(eIDAS review\)](#). [See proposal for a Regulation of the European Parliament and the Council amending Regulation \(EU\) No 910/2014 as regards establishing a framework for a European digital identity, COM/2021/281 final](#)

Question 22. In your opinion, who should provide such tools?

Please select as many answers as you like

- Data holders

Third parties

Other

Please specify who else should provide such tools:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

In order to incentivise individuals to share their data, they should trust the process by which those data are handled. Data intermediaries as per the Data Governance Act can help ensure that customers have meaningful control over the use of their personal data.

Question 23. Do you believe that licensed firms in open finance should be required to provide operational tools to enable customers to manage their right of consent with respect to the various financial services they are using?

- Yes
- No
- Don't know / no opinion / not applicable

Question 24. Should “strong customer authentication” (i.e. authentication based on the use of at least two security elements) under open finance framework be only used when customers first decide to connect/disconnect their account to a third party service provider or periodically?

- Connect/disconnect
- Periodically
- Never
- Don't know / no opinion / not applicable

Question 25. Should the authorisation to access customer data under open finance automatically expire after a certain period of time?

- Yes
- No
- Don't know / no opinion / not applicable

Data sharing can potentially result in market segmentation where consumers with a high-risk profile could be excluded from the market because of certain characteristics or where those who choose not to agree to share additional data,

which extends beyond data deemed strictly necessary for the provision of the relevant product, may end up paying higher prices for services ('price for not sharing data'). At the same time, more granular risk pricing may lead to lower prices. The use of alternative data may even open access to financial services to hitherto excluded individuals and businesses. The risk of data misuse, financial crime and fraud need to be appropriately managed in a data sharing framework.

Question 26. What are the key risks related to customer data sharing?

- Financial exclusion
- Privacy breaches
- Misuse of data (incl. fraud and financial crime)
- Other
- Don't know / no opinion / not applicable

Please specify to what other key risk(s) you refer in your answer to question 26:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

There are two risks in the open banking framework that will also apply to open finance:

- The onward provision of data and how this is regulated. For instance, a consumer may consent for an AISP to pass data to a broker, and then for the broker to pass it to a lender. These chains of consent can become complex.
- Data misuse. Accessed data could be used for other purposes which had not been intended by or known to individuals.

Question 27. What should be done to mitigate the risks of financial exclusion and data abuse?

Please select as many answers as you like

- Establish best practice guidelines on customer profiling
- Define in legislation specific data fields that may be used for customer profiling in the provision of various financial services
- Introduce a mandatory requirement for the provision of basic services as part of the licensing regime (akin to the basic bank account concept) and cap prices
- Other

Please specify what else should be done to mitigate the risks of financial exclusion and data abuse:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Clear rules on liability are important to ensure appropriate redress between actors in the data value chain in cases where data shared is misused, incorrect, or out-of-date.

Clear rules on liability are important to ensure appropriate redress between actors in the data value chain in cases where data shared is misused, incorrect, or out-of-date.

Question 28. Is there a need for additional rules in the financial sector to clarify the attribution of liability for the quality of customer data that is shared?

- Yes, horizontal liability principles across the financial sector are required
- Yes, but liability principles must be tailored sector-by-sector
- No
- Don't know / no opinion / not applicable

Question 29. In your opinion, should an open finance framework need a dispute settlement mechanism to mediate and resolve liability disputes and other customer complaints?

- Yes
- No
- Don't know / no opinion / not applicable

III. Modalities of data access and reuse in the financial sector

Data-driven finance necessitates the use of varied datasets, including public and private data, as well as personal and non-personal data. This not only calls for a combination of differentiated policy approaches when building the European financial data space, but also requires consistency with cross-sectoral legislative frameworks. Relevant personal data includes financial data, e.g. as regards savings, mortgages, consumer credit, investments, pensions and insurance. Non-financial data may also be useful, including data from online platforms (e.g. social media, e-commerce and streaming), public entities (e.g. tax and social security), utilities (e.g. water and energy), telecommunications, retail purchases, mobility (e.g. ticket purchases), environmental data, and Internet of things (IoT) data. Relevant non-personal data includes business registry data and high value datasets to be shared under the [Open Data Directive](#). 'Read' access allows for simple access to data, e.g. to populate aggregators and comparative tools. 'Write' access includes 'read' access and enables third parties to perform actions on customer's behalf, e.g. to open/close accounts in case of switching financial service providers or initiate other types of transactions. This sections covers questions on the type of data and type of access required for the development of specific products and services in the financial sector.

Question 30. Are you aware of any financial services or products based on data sharing that already exist or are under development beyond those enabled under PSD2?

- Yes
 - No
 - Don't know / no opinion / not applicable
-

Question 31. Please explain briefly the potential that these services or products involving financial data sharing hold for consumers and/or businesses:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Questions for firms using customer data held by financial firms

Users of customer data held by financial service providers may access them based on an ad hoc contract concluded with the data holder.

Question 32. Have you had any practical experience with ad hoc contracts to ensure data access?

- Yes
 - No
 - Don't know / no opinion / not applicable
-

Question 33. In your experience, are data holders willing to conclude such contracts in practice?

- Yes
 - No
 - Don't know / no opinion / not applicable
-

Question 34. At how much would you estimate the average cost of concluding an ad hoc contract for data access?

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Questions for all respondents

Contractual schemes

Contractual schemes are voluntary data-sharing mechanisms that are based on a contract. The [Euro Retail Payments Board \(ERPB\)](#) is currently developing a contractual scheme between data holders and data users for access to data, with participation from business and consumer organisations. The Commission would like to better understand the potential of such contractual schemes for open finance.

Question 35. Are you a member of any contractual scheme or expecting to become one in the next few years?

- Yes
- No
- Not sure
- Don't know / no opinion / not applicable

Question 36. Do you think that contractual schemes offer more benefits than just data & API standardisation?

- Yes
- No
- Don't know / no opinion / not applicable

Please explain your answer to question 36.1:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 37. At how much would you estimate the cost of membership in such a scheme (including costs of joining the scheme, compliance /adjustment costs to meet scheme’s requirements, costs of providing the required data access under the scheme)?

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 38. Would you agree with the following statement: without any regulatory intervention, I would expect that any contractual challenges linked to open finance would be resolved within the next 3-5 years by stakeholders themselves?

- Agree
- Disagree
- Don't know / no opinion / not applicable

Question 39. What further measures to promote market adoption of contractual schemes should the EU take?

- non-binding calls on stakeholders
- make adherence to specific contractual schemes mandatory
- other measures
- none of the above
- Don't know / no opinion / not applicable

The [Data Act proposal](#) establishes a new data access right for the so-called Internet of things (IoT) data. However, it does not introduce any new data access rights in the financial sector, which would have to be set out in sectoral legislation in line with the general rules for business-to-business data sharing in all economic sectors, including finance, as set out in Chapter III.

Question 40. In your opinion, should the Commission consider to propose new data access rights in the area of open finance?

- Yes, without compensation
- Yes but only if the data holder receives compensation for making data available
- No
- Don't know / no opinion / not applicable

Question 41. Should any such new data access rights cover the following categories of data related to?

	Yes	No	Don't know - No opinion - Not applicable
Savings accounts	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Mortgage products	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
Lending products	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
Securities accounts and financial instruments holdings	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Insurance and pension products	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Risk assessment (eg credit and insurance risk)	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
Sustainability profile of financial services	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>

Question 42. In your opinion if such new data access rights are introduced, should financial institutions that are SMEs^[3] holding customer data be excluded from any such obligation (see e.g. Art 7 of the Data Act)

³ Small and medium-sized enterprises include enterprises with staff number between 10 and 250 and turnover between 2 and 50 million euros or a balance sheet total between 2 and 43 million euros

- Yes
- No
- Don't know / no opinion / not applicable

Question 43. In your opinion should large gatekeeper platforms^[4] requesting data access be excluded from being able to benefit from such data access rights (see Art 6(d) of the Data Act)

⁴ Gatekeepers are understood as providers of core platform services (such as online intermediation services, online search engines, online social networking services, video-sharing platform services, number-independent interpersonal communication services, operating systems, cloud computing services) which have a significant impact on the internal market, serves as an important gateway for business users to reach end users and have an entrenched and durable position in its operations or will have such a position in the near future

- Yes
- No
- Don't know / no opinion / not applicable

It is important to ensure full compliance with [GDPR](#) and [e-Privacy Directive](#) requirements, including when data is shared in real-time (e.g. standardised APIs). The GDPR provides several lawful grounds for the processing of personal data. If personal data is processed, the controller(s) must ensure that processing is based on lawful grounds in line with GDPR. Article 20 of Regulation (EU) 2016/679 provides for a right of data subjects to receive personal data concerning them, in a structured, commonly used and machine-readable format, and to port those data to other controllers, where those data are processed on the basis of Article 6(1)(a) or Article 9(2)(a) or on a contract pursuant to Article 6(1)(b). Data subjects also have the right to have the personal data transmitted directly from one controller to another, but only where technically feasible.

Question 44. Have you made use of Article 20 GDPR to access financial data or been requested such data access under Article 20 GDPR in the financial sector, and if so how frequently?

- Never

- Rarely
- Regularly
- Every week
- Don't know / no opinion / not applicable

Question 45. Are there any specific challenges related to the data processing principles of GDPR as regards

Please select as many answers as you like

- data lawfulness, fairness and transparency
- purpose limitation
- data minimisation (limiting data collection to what is directly relevant and necessary for a specified purpose)
- data accuracy
- data storage limitation
- data integrity and confidentiality
- Other

Question 46. In your opinion, what lawful grounds for the processing of personal data would be most useful for the purpose of open finance?

	1 (least useful)	2 (not so useful)	3 (neutral)	4 (quite useful)	5 (most useful)	Don't know - No opinion - Not applicable
Processing based on consent	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
Processing based on a contract	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Processing necessary for compliance with a legal obligation	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Processing necessary to protect vital interests of the data subject	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Processing necessary for the public interest	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Processing necessary for legitimate interests pursued by the controller or a third party	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

Question 47. Of the ones listed, which are the most important reasons preventing the portability right under Article 20 GDPR to be fully effective in the financial sector?

Please select as many answers as you like

- The absence of an obligation to provide the data on a continuous/real time basis
- The absence of standardised APIs
- The absence of standards ensuring data interoperability
- The absence of clear rules on liability in case of data misuse
- The absence of clarity as to which types of data are within scope
- The absence of incentives for data holders to provide high quality data, as there is no remuneration for making data available
- Other

IV. Technical infrastructure

Data sharing in the digital economy would require a dedicated infrastructure that enables machine-readable access and machine-to-machine communication, so that the various firms in the data value chain can interact and cooperate efficiently. The task of putting in place such an infrastructure might be costly and involve many steps, including the

standardisation of data and the access technology itself. Prior to engaging in such activities though, it is indispensable to determine what type of data format would be required. This section covers questions on the standardisation of data and application programming interfaces (APIs).

Question 48. Do commonly agreed standards on data formats exist in your area of activity in the financial sector?

- Yes
- No
- They are currently being developed
- Don't know / no opinion / not applicable

Question 48.1 If commonly agreed standards on data formats do exist in your area of activity, please specify what is the proportion of holders of customer data in the financial sector that make use of these standards?

- Less than 10%
 - 10-50%
 - The majority
 - Don't know / no opinion / not applicable
-

Question 49. Should the EU take further measures to promote market adoption of standardised data formats?

- Non-binding calls on stakeholders
 - Make use mandatory
 - Other measures
 - None of this
 - Don't know / no opinion / not applicable
-

Question 50. Should the EU take further measures to promote market adoption of standardised APIs?

- Non-binding calls on stakeholders
 - Make use mandatory
 - Other measures
 - None of this
 - Don't know / no opinion / not applicable
-

Question 51. Who is best placed to develop common standards for APIs?

- Industry stakeholders
- European supervisory authorities
- International or European standardisation organisations (e.g. CEN)
- Other
- Don't know / no opinion / not applicable

Please specify who else is best placed to develop common standards for APIs:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Cross-industry and consumer fora, made up of representatives from industry (data holders), data users and consumer representatives.

Question 52. Would you agree with the following statement: even without any regulatory intervention, within the next 3-5 years I would expect most if not all larger financial institutions in the EU to provide consent-based access to key customer data via standardised APIs.

- Agree
- Disagree
- Don't know / no opinion / not applicable

Questions for firms using customer data held by financial firms

Question 53. Absent standardisation of data, would you be able to offer your services?

- Yes
 - To customers of a limited number of financial firms only
 - In a limited number of Member States only
 - No
 - Don't know / no opinion / not applicable
-

Question 54. What is your estimate of cost savings from using data based on commonly agreed standards?

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 55. Would you expect new products to be developed if more data were available based on commonly agreed standards?

- Yes
- No
- Don't know / no opinion / not applicable

Question 56. To the best of your knowledge, what is the proportion of holders of customer data in your sector of activity that make these data available based on APIs?

- Less than 10%
- 10-50%
- The majority
- Don't know / no opinion / not applicable

Question 57. Do you expect this proportion to increase significantly in the next 3-5 years?

- Yes
- No
- Don't know / no opinion / not applicable

Question 58. Are currently available APIs based on generally accepted standards?

- Yes
- No
-

Don't know / no opinion / not applicable

Question 59. Are you making use of APIs or are you planning to do so in the future?

- Yes
 - No
 - Don't know / no opinion / not applicable
-

Question 60. Would you expect new products to be developed if more data were available through APIs?

- Yes
 - No
 - Don't know / no opinion / not applicable
-

Question 61. What is your estimate of cost savings from accessing data through an API as opposed to specific case-by-case requests?

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Questions for financial firms holding customer data

Question 62. Have you already developed an API for data access by customers and third parties on behalf of customers?

- Yes, under PSD2
 - Yes, outside the scope of PSD2
 - No
 - Don't know / no opinion / not applicable
-

Question 63. Would you see any cost savings in your operations associated with the use of such APIs?

- Yes
- No
- Don't know / no opinion / not applicable

Question 64. What is your estimate of the cost of setting up an API for access to your customer data and the ongoing costs for running it?

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 65. Would you agree with the following statements?

	Yes	No	Don't know - No opinion - Not applicable
The cost of developing an API is subject to economies of scope – i.e. once an API is developed using it for additional types of data increases the development costs only marginally	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
The cost of developing and running an API is lower if it is based on generally accepted and widely used data standards	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Question 66. Do you apply or intend to apply any generally recognised standards for your APIs beyond PSD2?

- Yes, currently applied
- Yes, envisaged
- No, because no standards are available
- No, because not interested
- Don't know / no opinion / not applicable

Question 66.1 Please specify for which generally recognised standards you

apply or intend to apply:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

PART II

Part II of the consultation contains the following section

- V. Specific questions on selected use cases involving data sharing in the financial sector

V. Specific questions on selected use cases involving data sharing in the financial sector

One potential use case would involve enabling access to customer information gathered in the context of the suitability and appropriateness assessment, as well as access to customer's investment data (e.g. securities accounts, pensions, etc.). In the context of its work on a retail investment strategy as envisaged by the [capital markets union action plan](#), the Commission is considering ways to improve the suitability and appropriateness assessment in order to help retail investors better achieve their investment goals. The present consultation includes questions on the access to and re-use of customer-profile data, as well as access to data on customer's current investments. In addition, this consultation contains questions on a use case relating to access to SME data to enhance SME financing options. Annex I provides an overview of other use cases that were discussed by the open finance subgroup.

Transferability of customer-profile data (Personal Investment Plan (PIP), suitability assessment) and access to customer data on current investments

The Commission is currently exploring different ways to improve the suitability and appropriateness regimes under the retail investor protection framework. One of the approaches being assessed is the above-mentioned PIP. The PIP would be a possible portfolio-centric approach to investing that the Commission is consulting on in a separate consultation ([Targeted consultation on options to enhance the suitability and appropriateness assessments](#)). In short, the PIP onboarding process would entail gathering customer-specific data akin to the information currently collected by investment intermediaries under the suitability and appropriateness regimes. The 'output' of that assessment would be an asset allocation strategy that lays out the appropriate risk-return for the customer having regard to his or her investment objectives and constraints.

This targeted consultation explores how open finance might enable access to and reuse of customer-profile data and customer's current investment data in order to improve the suitability and appropriateness regimes under the retail

investor protection framework and/or -should the Commission propose it - the possible development of a PIP. Customer profile data should be understood as comprising data that form the basis of the suitability and appropriateness assessments performed by financial intermediaries.

It should also be understood as covering both data which is required as input to the suitability and appropriateness assessments (or a possible future PIP) and the 'output' data. The former would comprise all the information that the financial intermediary is asked to collect in the process of suitability assessment. The latter is to be understood as the asset allocation strategy drawn up by the financial intermediary.

Enabling data to be shared between financial intermediaries with the customer's permission could prove to be an important element of the customer-centric and portfolio-focused approach to investing. This would have two aspects:

- First, the rules around portability of customer-profile would ensure that information can be seamlessly transferred by the customer to another financial intermediary. Such an approach might facilitate the uptake of new tailored and customer-centric approaches to help customers better manage their investments or to facilitate customer switching between intermediaries, or using multiple financial intermediaries. This might be achieved either by enabling the customer to receive the data in a standardised and structured form and transfer it onwards (portability) or by ensuring that brokers set up IT infrastructures such as APIs for the secure sharing of information.
- Secondly, enabling further innovation and supporting adequate product offer for the benefit of retail investors would require that financial intermediaries could access data on investment products already held by their customers (including securities accounts as well as life insurance and pension products). If financial intermediaries or other service providers gain or maintain an up-to-date overview of the customer's investments, they could develop new tools and services to offer more tailored products to retail investors, analogous to analytics services offered to retail customers based on PSD2 data. Such an approach could bring about additional data-driven portfolio analytics services, ultimately giving more tools to the investor to make informed investment decisions. Specifically related to the PIP, access to such data would allow financial intermediaries to assess whether customers' investments are in line with their respective asset allocation strategy or whether they may need to make adjustments.

Transferability of customer-profile data

Customer-profile data could, for example, include information on the customer's risk and sustainability preferences, knowledge and experience, transaction track record, ability to bear losses, wealth, income and the customer's investment horizon. It could also include relevant documents and information required under anti-money laundering and terrorist financing legislation.

Question 67. Do you think that customer-profile data should be accessible to other financial intermediaries or third-party service providers through an API-based infrastructure (subject to customer permission)?

- Yes
- No
- Don't know / no opinion / not applicable

Please explain your answer to question 67:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Increased data availability on sustainability can help support consumers in controlling their energy consumption and in providing them with a carbon footprint and services/ products 'proposals to improve it.

Question 68. The portability of which specific customer-profile data would be essential in order to enable creation of new products and services as well as bring broader benefits for retail investors as described above?

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 69. In your opinion, are there any risks and constraints associated with sharing the customer-profile data between financial intermediaries?

- Yes
- No
- Don't know / no opinion / not applicable

Question 70. Please explain if these risks and constraints apply to the sharing of all or only specific data fields and how this could potentially be addressed:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 71. Please provide us with an estimate of costs that would be incurred by an investment firm in setting up data access points, e.g. in the form of APIs, to allow the customer to share his or her customer-profile data:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Access to customer data on current investments

Question 72. Subject to customer's agreement, should financial intermediaries or other third party service providers be able to access data on customer's current investments with other financial service providers:

a) to develop new tools for the benefit of customer?

- Yes
- No
- Don't know / no opinion / not applicable

Please explain your answer to question 72 a):

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Increased data availability on investments can help support consumers in their investment planning. It can also boost their score and help strengthen their financial literacy, due to increased awareness through financial institutions' advisory work.

b) to ensure smooth implementation of the suitability and appropriateness assessments (or a possible compilation of a personal investment plan and to make implementation of the associated asset allocation strategy more efficient)?

- Yes
- No
- Don't know / no opinion / not applicable

Please explain your answer to question 72 b):

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Increased data availability on investments can help support consumers in ensuring that products are suitable to meet their individual needs.

Question 73. Should the access be granted to:

- All data on all investments
- All data on some investments
- Some data on all investments
- Don't know / no opinion / not applicable

Please explain your answer to question 73, notably which data and which investments in the case of partial access:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 74. Subject to customer's agreement, should financial intermediaries and other third-party service providers be able to access data on customers' current investments with other financial service providers to provide investment analytics services, such as a consolidated overview of the client's investments and an assessment of the risk-return metrics of the client's portfolio?

- Yes
- No
- Don't know / no opinion / not applicable

Please explain your answer to question 74:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 75. Subject to customer's agreement and if third party access to customers' current investment data were to be enabled, should it also be made possible to access data on their past investments? In the affirmative, what would be the main use cases for sharing such data?

- Yes
- No
- Don't know / no opinion / not applicable

Please explain your answer to question 75:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 76. Do you think that enabling customers to share their data on their current investments across financial intermediaries could encourage greater competition and innovation in the provision of investment services?

- Yes
- No
- Don't know / no opinion / not applicable

Please explain your answer to question 76:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 77. Please provide us with an estimate of costs that would be incurred by an investment firm in setting up data access points, e.g. in the form of APIs, to allow the customer to share data on his or her current investments:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

SME financing

Similarly to the investment use case, the SME financing one consists of two aspects. First, SMEs frequently face challenges accessing credit and are exposed to higher transaction costs and risk premiums than larger enterprises. Lenders often lack sufficient information to assess adequately SME creditworthiness, price credit risk and tailor financial products. Primary data collection from SMEs during a loan application process is costly and may not deliver all the relevant data. To make sure that the funding provided is appropriate to the economic and financial circumstances of SMEs, credit institutions and other lenders might benefit from the additional access to data, including ecommerce data. Online commercial activity and other cross-sectoral data generally improves the quality of SME creditworthiness assessment and may lead to enhanced financing, with a positive impact on the overall financial health of SMEs.

Second, open finance principles could also be applied to the sharing of data relevant to SME funding applications among funding providers, which is one of the actions under the [capital markets union action plan](#). Credit institutions and alternative providers could allow authorised funding providers to access the relevant SME data via APIs in a standardised and machine-readable format, subject to the SME's consent. Another possibility would be to ensure portability of data in a structured and machine-readable format that SMEs could transfer to other financial intermediaries themselves. In both cases, the data shared would be retrieved from the SME's funding application. By facilitating the sharing of standardised data on SMEs with funding providers, such a scheme would have the potential to help SMEs secure funding while helping funding providers source new clients / investments.

Assessing SME creditworthiness

Question 78. Is SME data accessible today via regulatory requirements or are there practical examples of contractual access to data required for SME creditworthiness assessment?

- Yes, SME data is accessible today via regulatory requirements
- No, there are practical examples of contractual access to data required for SME creditworthiness assessment
- Don't know / no opinion / not applicable

Question 78.1 If there are practical examples of contractual access to data required for SME creditworthiness assessment, please specify between whom arrangements would be needed:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Commercial credit reporting companies specialize in the collection and processing of commercial credit-related information and data, and subsequent distribution or provisioning of credit reports and other

analytical tools. Those companies are reported loan information and any other credit facility by credit institutions according to predetermined definitions and templates. Often, the only standard information that is available to assess their creditworthiness is the credit file or the history of owners or operators of the business.

Still, detailed and reliable financial statements or comparable information of SMEs is not yet widely available to commercial credit reporting companies. The same can be said about other “structured” data on payments, crowdfunding transactions, factoring, leasing, credit insurance, transactions, etc.

Question 79. Is the required data already standardised (e.g. either by market operators or via regulation)?

- Yes
- No
- Don't know / no opinion / not applicable

Question 79.1 If the required data is not yet standardised, what steps would be necessary to harmonise data formats to ensure that such data sets are of needed quality (accurate, reliable, complete, etc.)?

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

As a first step, policy makers and regulators should promote SMEs to use as much as possible digital services to run their businesses since these services leave a digital record that can be accessed and combined with other information to be analyzed for creditworthiness. Policy makers should also encourage government agencies to digitize government services, such as tax filing, company registration and other government services, to encourage a digital footprint for MSMEs and individuals.

Question 80. Is the data required for SME creditworthiness assessment readily accessible from a technical perspective (e.g. via standardised APIs)?

- Yes
- No
- Don't know / no opinion / not applicable

If the data required for SME creditworthiness assessment is not readily accessible from a technical perspective, please specify which actor in the use case should bear the cost of making it available and why

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Sharing of SME data across financial institutions

Question 81. Do you think that a referral scheme for SMEs through an API-based infrastructure based on standardised data, giving a financial intermediary access to data held by another financial intermediary, could be effective in helping them secure alternative funding?

- Yes
- No
- Don't know / no opinion / not applicable

Question 82. Please provide us with quantitative estimates of costs that would be incurred by a funding provider due to setting up data access points, e.g. in the form of APIs, to allow the SME to share its funding application data with alternative funding providers:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 83. Are you aware of existing practical examples of contractual access to SME funding application data?

- Yes
- No
- Don't know / no opinion / not applicable

Question 84. Are there any significant legal obstacles for accessing SME funding application data held by another funding provider?

- Yes
- No
-

Don't know / no opinion / not applicable

Question 85. What steps would be necessary to harmonise data formats and access conditions to ensure adequate quality of SME data (accurate, reliable, complete, etc.)?

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

PART III

Part III of the consultation contains the following section

VI. Other aspects of data sharing in the financial sector and related obstacles

VI. Other aspects of data sharing in the financial sector and related obstacles

Use of aggregated supervisory data for research and innovation

The [supervisory data strategy of December 2021](#) states that the Commission will look into ways to make data available more extensively for research and innovation, while protecting data confidentiality. In its 2023 progress report, the Commission will assess whether any regulatory adjustments can be made to enable the sharing and reuse of reported data for innovation purposes.

Question 86. Are there any legal obstacles today to obtain and use fully anonymised and aggregated supervisory data for research and innovation purposes?

- Yes
- No
- Don't know / no opinion / not applicable

Please explain your answer to question 86:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 87. In your opinion, what areas hold research and innovation potential based on the use of anonymised and aggregated supervisory data?

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Legal certainty for voluntary data sharing among financial institutions to improve risk monitoring or compliance and further develop related tools

The [Commission proposals for a Digital Operational Resilience Act in the financial sector](#) include explicit provisions clarifying that financial institutions may exchange amongst themselves cyber threat information and intelligence in order to enhance their digital operational resilience, in full respect of business confidentiality, protection of personal data and guidelines on competition policy (Article 40). These proposals were aimed to ensure legal certainty about the possibility of such exchange of information and data.

Question 88. Would you consider it useful to provide for similar “enabling clauses” for other types of information exchange among financial institutions?

- Yes
- No
- Don't know / no opinion / not applicable

Question 88.1 If you consider it useful to provide for similar “enabling clauses” for other types of information exchange among financial institutions, please indicate in which areas and please explain:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Additional information

Should you wish to provide additional information (e.g. a position paper, report) or raise specific points not covered by the questionnaire, you can upload your additional document(s) below. **Please make sure you do not include any personal data in the file you upload if you want to remain anonymous.**

The maximum file size is 1 MB.

You can upload several files.

Only files of the type pdf,txt,doc,docx,odt,rtf are allowed
